HP models supported by Print Director Integrated

These HP models can run Print Director Integrated. They must be HP **Enterprise** or **Managed** models with FutureSmart firmware; HP **Pro** models are not supported.

Each printer uses one embedded licence: a full **Embedded Controller** licence for multifunction printers, or a **Mini Embedded Controller** licence for single function printers and scanners (and the M430 multifunction printer). Resource Manager works out which one a printer needs from its model name.

The **Minimum firmware** column gives the FutureSmart version the printer must run. Models marked FutureSmart 4 cannot be upgraded to FutureSmart 5.

Other HP Enterprise and Managed models with FutureSmart 5 or later firmware should also be able to run Print Director Integrated. If a model is not listed, ask your Print Director partner.
